

# THE SALT PASTES

## Neutral Salt Paste

for all types of game

Attractants and - if necessary - medication can be mixed in (keep to the legislation!)

## Truffle Salt Paste

for wild boar

## Aniseed Salt Paste

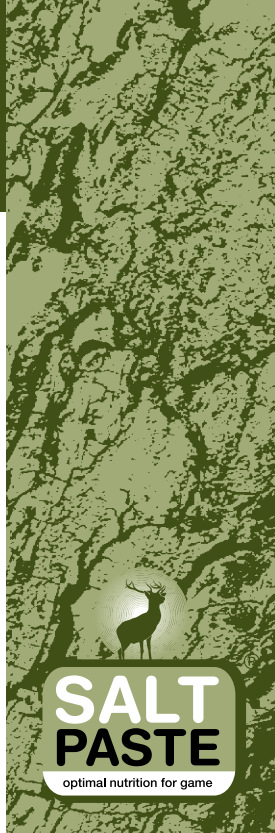

for red deer, fallow deer, mutton sheep, and roe deer

with aniseed flavour

## Growth Plus Salt Paste

for growth, development of fur and antlers

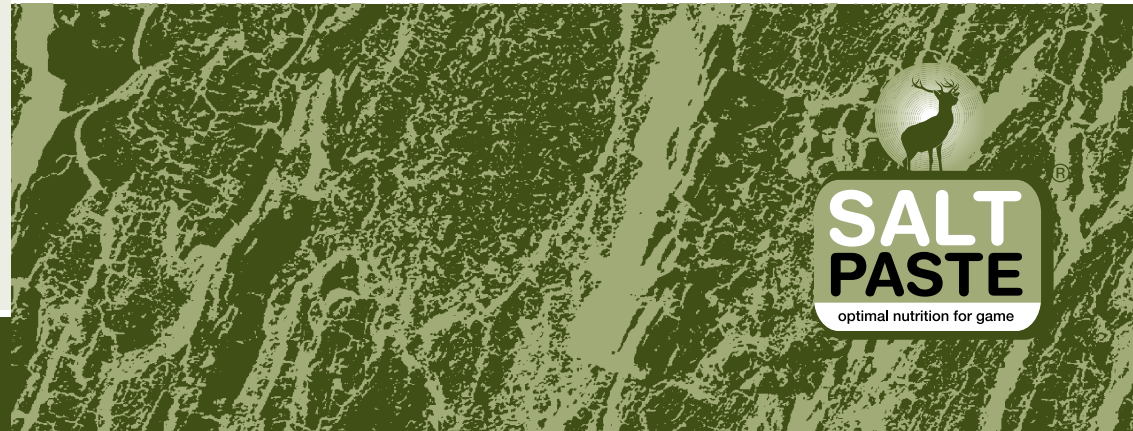

# SALT PASTE

optimal nutrition for game

# SALT PASTE IN PRACTICE

# SALT PASTE

optimal nutrition for game

# APPLICATION EXAMPLES

The salt paste is to be applied flexibly in everyday use on the hunting ground. Almost everywhere, the added attractants ensure that the salt-licking points are quickly found. If possible, place the salt paste out during dry weather, in order to allow swift hardening. Placing on old tree stumps has proven effective. The salt paste is absorbed into the wood and supplies the game with the necessary minerals over a long period.

**before/after**

**cut into the tree stump with the power saw**

**put in salt paste**

**old tree stump**

**coat salt stick thinly**

**Tip:**  
An old tree stump that is already slightly weathered is most suitable!

**apply a coating approx. 3 to 5 cm thick to the salt-licking point (ideally in dry weather)**

**Tip:**  
How you can prevent the fox from relieving himself on the tree stump!
